

Bialik students at Melbourne University

BIALIK College VCE Biology students recently visited the University of Melbourne to gain insight into DNA manipulation. The year 11 and 12 stu-

dents learnt about the social, environmental, ethical and political issues that govern and dictate the world of gene technology.

The students spent the day putting theories into practice using a variety of DNA manipulation techniques. The high-schoolers were also taught about genetically engineered food and the ethics behind such technology.
